“

I have a patient with moderate stage 2 post mastectomy lymphedema. She is 55yrs old and a respiratory therapist at a busy hospital. She was very concerned about having to keep her standard multi layer bandaging system on after leaving her work day. The Fast' n GO has been a wonderful alternative to traditional bandaging for this patient. She is able to don and doff the system easily and can wash it when she gets home from work. The Fast'n GO is a wonderful alternative for our busy and on the go population!
